

Acknowledgments

I thank my supervisors Prof. Tim Wehling and Prof. Annica Black-Schaffer for the opportunity to work on this fascinating topic. I had a very enriching time in the summer of 2024 in the ‘Quantum Matter Theory’ group in Uppsala and I want to thank everyone for welcoming me so warmly and giving me an opportunity to get to know all the interesting topics being explored in the group. I want to especially thank Ankita and Quentin for helping me with all my questions about quantum geometry.

I want to thank everyone in the ‘Computational Condensed Matter Theory’ group in Hamburg for fruitful discussion, a great working environment and help with TRIQS and DMFT. I thank Niklas Witt for directly helping in understanding many aspects of superconductivity and for proofreading this manuscript.

I owe thanks to all developers of free software, especially the ones I used in this thesis: L^AT_EX, PYTHON, NUMPY, SCIPY, PANDAS, MATPLOTLIB, GIT.

I thank my family for their continuing support. I especially thank Liv for all the love and support over the past years.
